How do Earthquakes and Volcanoes impact our world?

What is the ring of fire? Research and create a poster.	Which rocks are natural and which are man made? Can you sort?	Create your own fossil.	Research and create your own fact file about a volcano.
Make your own seismograph using a cardboard box.	Make your own exploding volcano!	Create a poster all about different animals in French.	Write a shape poem about volcano using onomatopoeic sounds (Bang! Whoosh! Crash!)
Create a rock garden using different types of rocks.	Do we always need soil to grow things? Conduct an experiment and record your findings.	Research different myths and legends around the world about volcanos and earthquakes.	Research the clothing volcanologists wear to work. Design and label an outfit for a volcanologist.
Research rocks from outer space. What is a meteorite?	Create your own legend about how volcanoes were created.	Make your own earthquake proof building. (You could use marshmallows and spaghetti to do this!)	Using the computer create your own presentation about Tsunamis.
